Sequences of the invention are useful for treating immunomodulatory disorders such as cancers, tumours, inflammation, allergic reactions, transplant rejection, restenosis, antibody complex mediated diseases, autoimmune complications of AIDS (acquired immune deficiency syndrome), psoriasis, Behcet's syndrome, acute respiratory distress syndrome (ARDS), ischaemic heart disease, type I insulin-dependent diabetes mellitus, Addison's disease, atheroselerosis or leukemia. They are also used in gene therapy. The present sequence is Yaba-like disease virus (YLDV)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1017 BP; 383 A; 139 C; 207 G; 288 T; 0 other;
